Rating of the project's success was based on the following criteria: Efficiency, Effectiveness, Sustainability, Impact, and Resilience.

**Efficiency:** The project was considered efficient if it achieved its goals with the least possible waste of resources. The project was able to achieve a high level of efficiency by carefully planning and executing all activities with minimal waste and delays.

**Effectiveness:** The project was effective if it achieved its intended outcomes. The project was able to meet its objectives by providing a sustainable solution to the problem addressed.

**Sustainability:** The project was sustainable if it could continue to operate without external inputs. The project was able to achieve sustainability by developing a management plan that ensured the project's operations were self-sustaining.

**Impact:** The project had a positive impact on the community, with the majority of participants reporting increased income. The project was able to reach its target group and achieve the desired outcomes.

**Resilience:** The project was resilient if it could adapt to changing circumstances. The project was able to adapt to changes in the environment and internal operations to ensure its continued success.

The project was expected to bring a new source of livelihood to the target area and contribute to the local economy. The project was expected to benefit directly from the project, and the total cost of the project was estimated to be $339,930.00.
